Subject: LITERATURE MONITORING

Jennifer,

I am particularly interested in monitoring literature that presents information on the statistical analyses of biomarkers. As guidance for you, some keywords with respect to the analysis of biomarker data include:

- Inter-subject and intra-subject variation
- Dose-response modeling
- Mixed model analysis (linear and non-linear)
- Pharmacokinetics
- Sampling
- Molecular epidemiology
- Components of variance analysis
- Replicate sampling

I will update this list as the occasion arises.

Bettie
